

Advancement of Telehealth and Digital Practice in Physical Therapy

Learning Objectives

- The learner will be able to:
 - Describe the historical perspective of telehealth and digital practice in physical therapy
 - Identify key topics before, during, and after telehealth and digital physical therapist practice
 - Discuss current resources developed by the physical therapy profession (APTA, FSBPT, WCPT)

Telehealth & Digital Practice in Physical Therapy My Story

Title: Evaluation of Pragmatic Telehealth Physical Therapy Implementation During the COVID-19 Pandemic

Running Head: Telehealth Physical Therapy Implementation

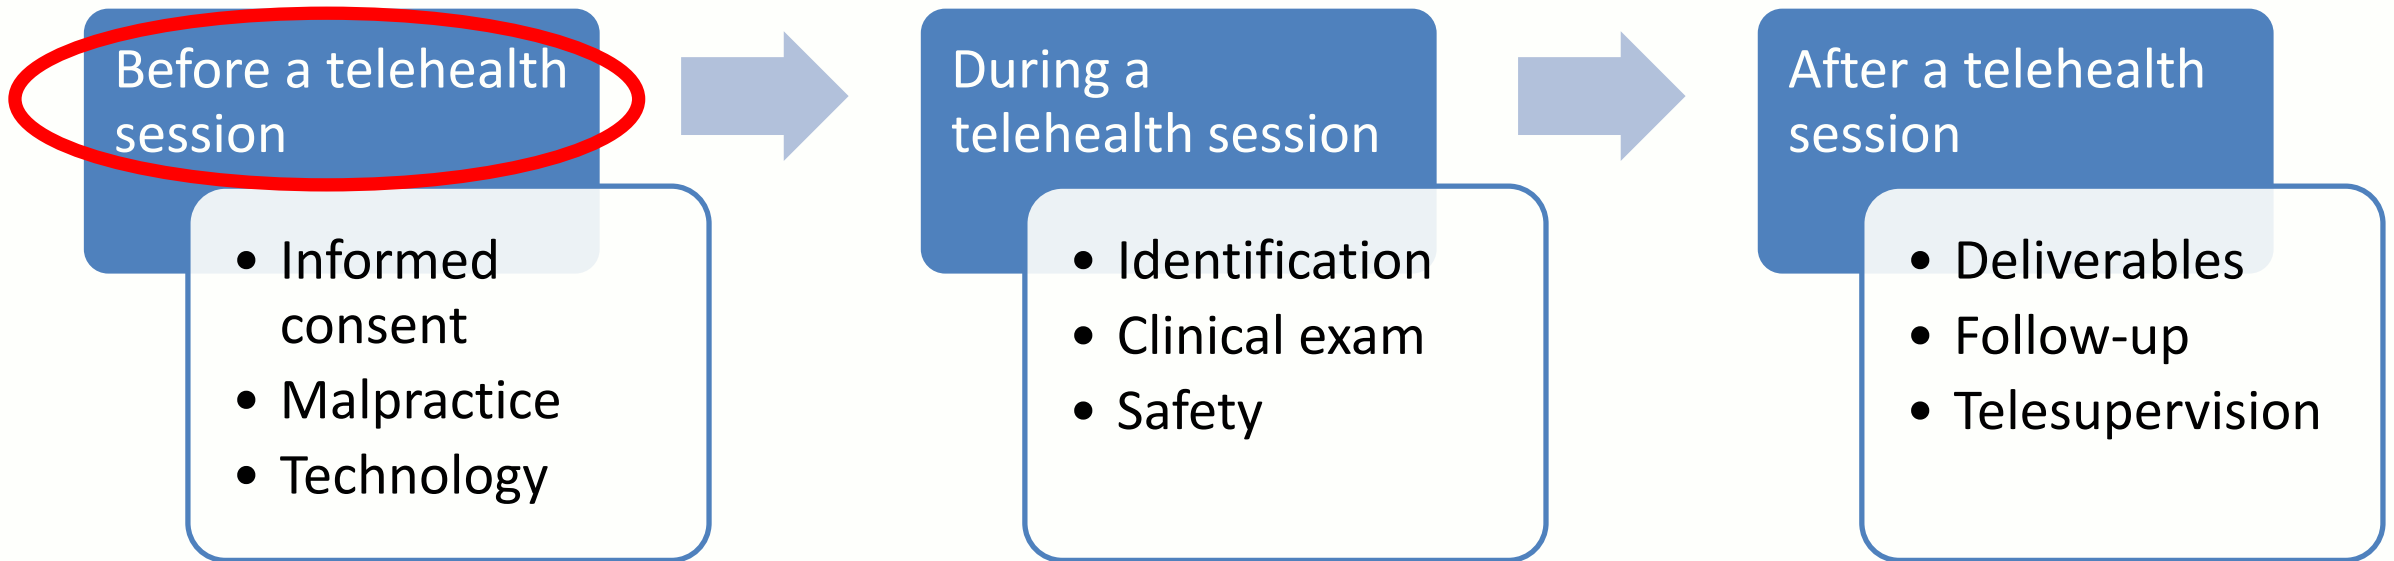

TOC CATEGORY: Original Research

AUTHOR BYLINE: Matthew J. Miller, Sang S Pak, Daniel R Keller, Deborah E. Barnes

Figure 2. Distribution of in-person and telehealth sessions (new and follow-up) by week during implementation phase (March 22 to May 16, 2020) and average sessions/week during comparison period (March 22 to May 16, 2019).

Telehealth Implementation

Agency for Healthcare Research and Quality

Informed Consent Resources for Telehealth

As the COVID-19 pandemic has forced healthcare providers to limit in-person visits, telehealth has expanded rapidly.

In response to the need to obtain informed consent from patients for virtual visits, AHRQ has created a [sample telehealth consent form](#) (Word, 26.6 KB) that is easy to understand and guidance for clinicians on how to [obtain informed consent for telehealth](#).

Access more information about [AHRQ's telehealth consent form](#) and other [health literacy resources](#).

Technology

Zoom Leads the Way

The most popular platform for video consults was Zoom, identified by 43% of PTs surveyed. Doxy.me was used by 30%, and Epic by 9%. Respondents identified more than two dozen platforms used to facilitate video-based care.

Telehealth Platforms Being Utilized

We make it easy to get started
By keeping things simple

**NO DOWNLOAD
REQUIRED**

With accessibility in mind, we have made Doxy.me extremely simple and easy to use for both clinicians and patients.

FREE TO USE

We believe cost shouldn't be a barrier to telemedicine. That's why Doxy.me is free for all.

WORLDWIDE USAGE

HIPAA, GDPR, PHIPA/PIPEDA, & HITECH compliant: We meet worldwide security requirements.

BAA INCLUDED

All individual providers get a free Business Associate Agreement (BAA) with Doxy.me. Sign up for free to download your BAA.

Accessible from everywhere
Your desktop, tablet & smartphone

Don't forget Business Associate Agreements – now & after PHE

PTs Obstacles To Providing Telehealth

Telerehabilitation Guide

July 2020, Version 1

Safety Expectations

The physical therapist:

- Obtains access to appropriate technical support for trouble shooting in the event of technical difficulties.
- Tests all technologies prior to client appointments to ensure the system is functioning well.
- Has an alternative method of contacting the client and provides the client with an alternate way of contacting the physical therapist. For example, in the case of an internet failure the physical therapist must be able to telephone the client.
- Has a safety protocol in place in the event of an emergency or adverse event, including:
 - contact information for first responders in the client's location, using designated phone numbers local to the client. Calling 911 from the physical therapist's location will not connect to emergency services in the client's location.
 - contact information for others within the client's environment (care providers, family members), and client consent to contact these individuals in the event of an emergency or adverse event.
 - plans and procedures to follow to manage adverse events while waiting for assistance to arrive.
 - plans and procedures for managing adverse events that do not require assistance from a first responder.
- Should be aware of other service providers in the client's area that they may refer the client to in the event of a client adverse event or complication.
- Facilitates the transfer of care to another treatment provider if the physical therapist or client determines that telerehabilitation is not appropriate.

The use of Critical Event Management Plans can help physical therapists to consider adverse events that they may potentially encounter within their practice environment and to identify the procedures, equipment, personnel, and other resources required to manage these events. For more information, see the Physiotherapy Alberta College + Association resource [Critical Event Management Plans](#).

Telehealth in the COVID-19 Era: A Balancing Act to Avoid Harm

J Jeffery Reeves^{1*}, MD; John W Ayers^{2*}, PhD; Christopher A Longhurst^{2*}, MD

¹Department of Surgery, University of California San Diego, La Jolla, CA, United States

²Department of Medicine, Division of Biomedical Informatics, University of California San Diego, La Jolla, CA, United States

Characteristics to consider for determining the appropriateness of telehealth.

Characteristic	Appropriate for telehealth	Potentially inappropriate for telehealth
Visit type	Follow-up visit for known/diagnosed disease state or patient condition	New patient (establishment of primary care or new consultation)
	Follow-up postprocedure visit with no patient complaints	Annual physical examination or well-child check
	Recurring medication or chronic medical condition review	Acute care prompted by an acute change in patient condition
	Initial or follow-up visit for mental health conditions	Initial psychiatry visits or annual follow-up for controlled substances
Patient characteristics	Existing, trusting, personal connection with the provider	Distrusting of health care professionals
	High health literacy	Low health literacy
	Robust social support system	Low social support system
	Anxious in health care settings	Poor vision/hearing
	Lives remotely or has inadequate transportation	Prefers in-person
	Prefers telehealth	
Chief complaint or disease state characteristics	Physical examination unlikely to be diagnostic	Physical examination may aid in diagnosis or prognosis
	N/A ^a	Examination findings may influence initial workup and/or management
	Focused physical examination can be performed virtually (ie, visual examination)	Focused examination cannot be performed virtually (ie, palpation of mass)
	Chief complaint with standardized initial workup and management	Chief complaints that often result in referral to acute care settings
Other considerations	English as a second language (interpreter required)	Patient has a poor internet connection
	Patient or close family member technologically savvy	Patient lacks technological capabilities to join video visit/telehealth encounter
	Patient with multiple family members at home who can join telehealth visit	N/A

^aN/A: not applicable.

Don't forget prior exposure, bias, super determinant of health matters

Telemedicine: Risk Management Issues, Strategies and Resources

RISK CONTROL MEASURES	STATUS	COMMENT/ ACTIONS PLAN
TRAINING REQUIREMENTS		
Educational and professional development requirements are specified, including equipment training, participation in pilot programs and familiarity with clinical protocols.		
Ongoing training – including review of proper documentation practices – is required for continued participation in the TMH program.		
Staff are trained in incident reporting, and adverse TMH occurrences are tracked and trended for quality improvement purposes.		
Staff members are tested for knowledge and proficiency regarding software applications and computer connectivity.		
TMH-related policies, procedures and staff training efforts are reviewed on an annual basis, with revisions based upon incident report findings and assessment of the program's safety, effectiveness and efficiency.		

RISK CONTROL MEASURES	STATUS	COMMENT/ ACTIONS PLAN
CONSULTATION ENVIRONMENT		
TMH sessions take place in a clinical setting that offers both privacy and professional amenities, analogous to traditional face-to-face consultations.		
The consulting space is well-lit, well-ventilated and well-equipped for safe patient/client examination, with an emergency alert system and easy access to infection control supplies.		
Consulting spaces are identified by signs, indicating that a private patient/client session is in progress.		
A comfortable waiting area is available for use by patients/clients and families.

Telehealth Session

Deliverables

CLINICAL AND OPERATIONAL GUIDELINES

A standard method of collecting and storing TMH information is established and implemented at both originating and distant sites.

A private and secure computer network is maintained to protect patient/client confidentiality and the integrity of information exchanged between sites/practitioners.

Policy prohibits the use of personal e-mail accounts for the exchange of patient/client protected health information, instead mandating the use of network-based accounts.

The TMH coordinator is swiftly notified of any changes regarding contact information of partner sites or practitioners, including business e-mail addresses.

Patient Satisfaction Survey

Telehealth Resources for PT and PTA Students

Phone Scammers And 'Teledoctors' Charged With Preying On Seniors In Fraud Case

By VICTORIA KNIGHT • OCT 7, 2019

Principal Deputy Inspector General Grimm on Telehealth

It has been just over a year into the COVID-19 pandemic and we remember the over 500,000 Americans who have lost their lives due to COVID-19. That figure is a stark reminder of the critical mission of the Department of Health and Human Services. Challenges in responding to the pandemic have been many, thorny and unprecedented. Consequential decisions often were made quickly to respond to the emergency and provide relief in the way of funding, supplies, and reductions in regulatory and procedural burden. This quick response and scope of relief make oversight, enforcement, transparency, program integrity, and accountability all the more important.

FOR IMMEDIATE RELEASE

Friday, September 25, 2020

Doctor Pleads Guilty to Obstructing Telemedicine Investigation

LITTLE ROCK-A Dallas-area doctor pled guilty this afternoon to obstructing a federal health care investigation. Cody Hilland, United States Attorney for the Eastern District of Arkansas, Michael C. Montavos, Special Agent in Charge of the Defense Criminal Investigative Service Southwest Field Office, Patrick Roche, Acting Special Agent in Charge of the Department of Veterans Affairs Office of Inspector General South Central Field Office, Miranda L. Bennett, Special Agent in Charge of the Office of Inspector General of the U.S. Department of Health and Human Services, and Diane Upchurch, Special Agent in Charge of the FBI Little Rock Field Office, announced Dr. Lorraine De Blanche, 56, pled guilty this afternoon before U.S. District Judge Brian S. Miller.

Patient complaints and a surge in claims for durable medical equipment (DME) and compounded prescription drugs triggered investigations into telemedicine fraud targeting federal insurers, including TRICARE, CHAMPVA, and Medicare. This prompted federal investigators to speak with medical providers linked to related DME claims and prescriptions.

Balancing telehealth evidence on cost, quality, and access – Not duplicating unwarranted services

- Tier 1 – Routine services or a check-in (telehealth)
- Tier 2 – Chronic symptoms/New patient with chronic symptoms (hybrid telehealth & in-person)
- Tier 3 – New patient with new symptoms or severe symptoms in any patient (in-person)
 - Differ in need for in-person evaluation (Dr. C. Powell, ATS)

Considerations for Outpatient Physical Therapy Clinics During the COVID-19 Public Health Crisis

May 2020

Patient Triage

Determining whether a patient should be seen in the clinic or via telehealth should be a shared decision based on clinical judgment, patient needs and preferences, and local guidelines.

In-Clinic Appointments

- Patient cleared by a COVID-19 screening questionnaire in advance or at check-in. [See example.](#)
- Patient's health condition has high likelihood of deterioration or worsening if in-clinic care is not provided.
- Patient requires hands-on care.
- Patient desires to come in for treatment despite risks.

Telehealth Considerations

Consider recommending care delivered via telehealth when:

- Patient has [significant risk factors](#) for severe illness from COVID-19.
- Patient is concerned about coming into the clinic.
- Patient asks to be treated via telehealth.
- Patient can be treated effectively via telehealth, and the use of telehealth is preferred over no care if that is the only alternative.
- Patient's insurance covers telehealth visits.

Goals for Ensuring Value and Innovation in Telehealth for Physical Therapist Practice

- **Enhance communication** for screening, reassuring patients, and collecting outcomes in practice settings for COVID-19 screening and referral for testing.
- **Improve coordination** for a tiered approach to a physical therapist's care delivery for digital practice and telehealth options, to preserve PPE and ensure patient safety. Use a hybrid approach of in-person and telehealth delivery when optimal, and in-person physical therapy delivery for essential and emergent services.
- **Advocate** for federal, state, and local legislation and payment for telehealth physical therapy services post-public health emergency in order to ensure continuum of care in physical therapy.

APTA Resources

Summary of Medicare Telemedicine Services

TYPE OF SERVICE	WHAT IS THE SERVICE?	HCPSC/CPT CODE	Patient Relationship with Provider
MEDICARE TELEHEALTH VISITS	A visit with a provider that uses telecommunication systems between a provider and a patient.	<p>Common telehealth services include:</p> <ul style="list-style-type: none"> • 99201-99215 (Office or other outpatient visits) • G0425-G0427 (Telehealth consultations, emergency department or initial inpatient) • G0406-G0408 (Follow-up inpatient telehealth consultations furnished to beneficiaries in hospitals or SNFs) <p>For a complete list: https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Telehealth-Codes</p>	<p>For new* or established patients.</p> <p>*To the extent the 1135 waiver requires an established relationship, HHS will not conduct audits to ensure that such a prior relationship existed for claims submitted during this public health emergency</p>
VIRTUAL CHECK-IN	A brief (5-10 minutes) check in with your practitioner via telephone or other telecommunications device to decide whether an office visit or other service is needed. A remote evaluation of recorded video and/or images submitted by an established patient.	<ul style="list-style-type: none"> • HCPCS code G2012 • HCPCS code G2010 	For established patients.
E-VISITS	A communication between a patient and their provider through an online patient portal.	<ul style="list-style-type: none"> • 99431 • 99422 • 99423 • G2061 • G2062 • G2063 	For established patients.

Telehealth in Physical Therapy Policy Recommendations for Appropriate Regulation

The purpose of this document is to provide information and general guidance to physical therapy jurisdictional authorities for regulating the use of telehealth technologies in the practice of physical therapy.

In developing these recommendations, the committee conducted a review of other professions' models and best practices, telehealth nomenclature, published practice/clinical guidelines.

[Download the Telehealth in Physical Therapy Document](#)

[Review the 50 state survey of Telehealth Laws and Regulations](#)

<https://www.fsbpt.org/Free-Resources/Regulatory-Resources/Telehealth-in-Physical-Therapy>

Telehealth and Physical Therapy Providers

In light of COVID-19, many jurisdictions are offering guidance to physical therapy practitioners using telehealth during the current crisis. To provide and bill for physical therapy services via telehealth, a PT or PTA must verify that they are practicing legally and ethically in the jurisdiction in which the patient is located. The physical therapy regulatory board is the ultimate authority on the licensure/compact privilege requirements to provide physical therapy services in the jurisdiction.

At this time FSBPT recommends individual practitioners refer to the state board(s) in which they plan to provide physical therapy services for the most current information.

2021 APTA Telehealth Certificate

The COVID-19 pandemic significantly increased the number of patients seeking physical therapist services via telehealth. This paradigm shift will improve access to care, but it also brings change. APTA has developed a telehealth certificate series to ensure that PTs, PTAs, and students are prepared to provide excellent care via telehealth. Learn best practices and tips covering ethical and regulatory considerations, administration and marketing, technology, and clinical application.

Enrollees must complete six mandatory core courses within six months of enrollment to receive the APTA telehealth certificate. Elective courses are optional and not required to receive the APTA telehealth certificate.
