

F25.17: The Sociological and Health Effects Of COVID-19 Among U.S. Essential Mexican and Latina/o Farmworkers

Overview

This research project will contextualize the sociological and health disparities effects and impacts of COVID-19 among essential Mexican and Latina/o farmworkers in the United States (U.S.). Combining a review of scholarly literature on Mexican and Latina/o farmworkers populations in the U.S. with a reading of news reporting on how this population formation has been affected by the pandemic. It will discuss issues within health and social inequalities and economic disparities, which analyses the COVID 19 social and political effects on this essential formation. Next, it will draw on recent media reporting to explore health and social disparities within essential Mexican and Latina/o farmworkers in the U.S. prior to COVID-19. Finally, it will close by reflecting on U.S. Mexican and Latina/o essential farmworker experiences and perspectives on this global pandemic. In the potential findings of this research design proposal, it will use qualitative primary reports, articles, and news sound bites on the social and health disparities and effects of COVID-19 among U.S. essential Mexican and Latina/o families to provide there were many social problems and prior to COVID-19.

What the student will DO and LEARN

Each student will learn how to created a research design, literature reviews, and various research methods development skills in working six hours a week.

Additional benefits

Attain research method and practical applications to be successful in graduate student.

Additional qualifications

N/A

Time commitment

6 hrs/week for 30 weeks
